

ALR Reconnaissance Report

Availability Low Reconnaissance — Passive-First OSINT

Target	203.0.113.10
Run ID	ed514677aa55
Generated	2026-03-18 00:23 UTC
Mode	Passive-Only
Mock Data	YES — for demo/dev only

WARNING: This report contains MOCK/FALLBACK data. Results do NOT reflect real reconnaissance. Install real tools and run without --allow-mock for production use.

Executive Summary

Passive and lightweight reconnaissance was conducted against 203.0.113.10. The current evidence set is limited 0 surface observation(s) were identified. This may indicate a low externally-visible footprint, or that additional collection methods would be needed to build a fuller picture. All findings are heuristic and require manual validation.

Data Collection Scope & Reliability

The following table shows which data collection modules were active during this run and the type of data source each represents.

Module	Source Type	Notes
censys	disabled	Module disabled for this run
ct	skipped	Skipped (not applicable for this target type)
dns	skipped	Skipped (not applicable for this target type)
github	skipped	Skipped (not applicable for this target type)
http	mock	MOCK data — not real reconnaissance
ports	skipped	Skipped (not applicable for this target type)
rdap	rdap_passive	RDAP/WHOIS/ASN registry data (public, passive)
subdomains	skipped	Skipped (not applicable for this target type)
tech	heuristic	Inferred from HTTP metadata (no external call)

Reconnaissance Summary

Data Point	Value
Subdomains discovered	0

CT log subdomain hints	0 (source: disabled)
RDAP/WHOIS/ASN data	Available
ASN identified	—
HTTP assets identified	2
HTTP assets reachable	2
Open ports detected	0
GitHub public hints	—
Surface observations total	0
High-priority observations	0
Medium-priority observations	0
Priority review targets	0

Surface Analysis Findings

The current passive and light-active collection identified limited externally visible indicators for this target. No strong review targets were identified from the available data. This may indicate a low externally-visible footprint, or that additional collection methods would provide more context.

Priority Review Targets

No high-priority review targets were identified from the current evidence set. This does not indicate the target is free of risk it reflects the limits of the current passive evidence.

Infrastructure & Ownership Context

RDAP/WHOIS/ASN data was not available for this run. This may be due to network restrictions, RDAP service unavailability, or the target being an IP address without RDAP coverage.

HTTP Exposure Summary

2 HTTP asset(s) were identified. 2 responded as reachable.

URL	Status	Title	Server
http://203.0.113.10	200	Website	nginx
https://203.0.113.10	200	Website	nginx

Public Exposure Hints

No GitHub public exposure hints were identified or this check was not enabled. Use --enable-github-check to include this in future runs.

Limitations & Notes

- **CRITICAL:** This run used MOCK/FALLBACK DATA. None of the findings represent real reconnaissance output.
- This report is based on passive OSINT and lightweight active collection. It does not represent a comprehensive security assessment.
- Passive collection cannot observe internal systems, authenticated endpoints, or assets that do not appear in public data sources.
- Certificate Transparency logs and RDAP data reflect public registry information and may lag behind real-world changes by hours or days.
- Subdomain discovery is limited to public resolution and passive databases private or recently provisioned subdomains may not appear.
- All findings are heuristic pattern indicators. None constitute confirmed vulnerabilities without further manual investigation.
- This PDF may be uploaded to ChatGPT or another AI assistant for manual interpretation of findings. The assistant will not have access to raw data beyond what is presented in this report.

Appendix Output References

The following output files were generated during this run:

- output.json Structured JSON full normalized data and surface findings [Available]
- report.md Markdown report human-readable summary of findings [Available]
- report.pdf This PDF primary deliverable for review and distribution [Not generated]

Disclaimer

All observations in this report are based on passive and/or lightweight active reconnaissance data. Findings are clue-based pattern indicators and do NOT constitute confirmed vulnerabilities. Manual validation by a qualified security professional is required before drawing conclusions or taking action on any observation listed here.
